

'It's time to change the submersible pump industry forever...

Welcome to the new intelligent Maxx family, AlertMaxx2

Delta Membranes, a leading UK supplier of basement waterproofing products has teamed up again with Packaged Pump Systems to create the next generation intelligent pump station high level alarm. Delta's AlertMaxx2 paired up with the PPS 'PumpSecure' monitoring plan, provides home owners total piece of mind and worry free pump station operation.

AlertMaxx2 can be a standalone high level alarm alerting home owners locally of high water conditions, but when connected through Wi-Fi to the PPS 'PumpSecure' system it becomes a whole new ball game!

With a 'PumpSecure' plan, PPS can keep an eye on your pump stations in real time and detect if something is going to go wrong before it does - this means they can be alerted to faults rather than discovering them yourself. To give you complete piece of mind, PPS will look after everything for you - all you need to do is be there to let their engineer in.

AlertMaxx2 collects data from various parameters using smart sensors and the data is fed back to the PPS Operations Centre. The software used has been developed by PPS based on the same sort of technology used to diagnose aircraft faults. The PPS Op-Centre is manned 24/7/365 by their skilled technicians who have years of experience in how pumps work.

As well as introducing Wi-Fi and a monitoring package, Delta have improved other aspects of the alarm unit, including a stronger sounder, improved visual display and simplified connections.

"I am very happy that we at PPS have been able to develop a state-of-the-art concept, in an industry sector that is usually considered somewhat 'conservative' and 'low tech'. I am pretty sure that our customers will be able to harvest the advantages of internet driven pre-emptive maintenance"

Ian Davis - Managing Director of Packaged Pump Systems Ltd.

What makes the AlertMaxx2 really different, is that the pumps are fed directly through the alarm. With this new way of connectivity, PPS can use the data captured and aim to reduce the amount of unexpected breakdowns by 70% and extend the lifespan of the pumps. In turn this will increase efficiency and reduce energy consumption.
